

**FERRANTI COIN METER - NEW £1.00 COIN**

**ADJUSTMENT INSTRUCTIONS**

What you will need:

New £1.00 coin blank

The right size metal hand file to modify the coin slot

**New £1.00 coin blanks and correctly sized hand files are available from us. Please contact us for details.**

The quick, simple procedure to amend your coin meter to accept the new £1.00 coin requires a minimal amount of filing to the upper edge of the coin slot with the correct size hand file and a £1.00 blank to check that the slot will accept the new coin. It is important not to over file the slot.

Procedure:-

1. Because the coin actions on these meters are likely to be troublesome to remove, it is recommended that this operation is carried out with the coin action attached to the meter. You will need to remove the cash box at the end of the procedure to remove the £1.00 coin blank.
2. **\*\*IMPORTANT\*\*** Isolate the meter from the mains supply before carrying out the following procedure
3. File the top edge of the coin slot until the new £1.00 coin blank fits. It is only a small amount of filing that is needed, it is important NOT to file too much off the coin slot.
4. Once the coin fits, blow into the coin opening to remove any minimal amount of debris, then switch the power to the meter back on.
